

ReactJS Developer

Módulo 8 - Resolución de los desafíos

Resolución del ejercicio 1

```
const miLogger = store => next => action => {  
  console.log("STATE: ", store.getState());  
  console.log("ACTION: ", action.type);  
  return next(action);  
}
```

Resolución del ejercicio 2

```
const miLogger = store => next => action => {  
  console.log("STATE: ", store.getState());  
  
  console.log("ACTION: ", action.type);  
  
  let result = next(action);  
  
  console.log("NEW STATE: ", store.getState());  
  
  if(action.type == "GUARDAR_ESTADO") {  
    localStorage.setItem('APP_STATE', JSON.stringify(store.getState()))  
  } else if(action.type == "CARGAR_ESTADO") {  
    const data = JSON.parse(localStorage.getItem('APP_STATE'));  
    store.dispatch({ type: 'CARGANDO_ESTADO', payload: data })  
  }  
  
  return result;  
}
```
